Subject: Getting Paris Up & Running
Posted by Jon Piro on Thu, 26 Apr 2007 01:19:03 GMT

Hey everybody,

As the subject states I'm trying to get Paris to work in Southwest Virginia.
Picked up a 442.1000EDS and a C-16(from Lucio on the for sale board). My
problem is the infernal 7/7 error. I know it's some kind of hardware conflict(IRG
or not seating the card right that I got from one of the web sites. I actually
was using a Power Mac G3 350 at OS9 and it was allowing me to access the
C-16. Then suddenly I started getting the error message. I've also tried
using a PC(Windows 98) with an AMD Duron processor and got the same message.
If anyone can steer me in the
direction of Paris recording I would be greatly appreciative. I've heard
so many good things about the system and have used Rolands' VS-1680 and tried
the Akai DPS-24 but was never fully
satisfied. That's why I took the plunge.

Thanks
JP
