Compiling a big list to investigate. I never imagined it happening but I've got a project that I think this is going to be the ticket since the client does't want the vox to sound totally legit and only partly "real."

So Far, I've got "Cantor" and "Delay Lama." What else is out there?

Doesn't Yamaha make one? Or maybe they just had one in the works... I can't recall the name of it and couldn't find it on their website.

Also, there's "Voices of the Apocalypse"... you type in the words & the software sings them back; as I understand it, your MIDI track drives the pitch & phrasing, but I think this app is only for Gigastudio.

Finally, I would definitely check the TC-Helicon VoiceLive & equivalent rackmount unit (VoiceOne); I've used the VoiceLive on a project recently where the guy wanted some thicker backups that also sound vaguely choir-ish, and it worked out great! Formant controls can set the 4 voices to sound like male or female vox and variants thereof, and the pitch followers are GREAT... very clean - you can choose scales for the backup vocals or program it for unisions, whatever. Very clean & high-quality, yet maybe synthetic enough for what you guy wants. Not cheap though, $800-ish street for the VoiceLive, and about a hundred bucks more for the rackmout version (which is strange, because the VoiceLive is a floor mount with footswitches & everything). Maybe if someone's got one in your area, you/he could rent it from them?

Digitech also makes a couple of hardware units called the Vx400 (~$249 street), and the Vocal 300 (~$199 street); now I haven't used either of these, but in the process of working on the backup tracks I mentioned above, one of the guys mentioned the Vocal 300, and that he'd messed around with it, and his comments were that it did some of the same stuff, and had a few more effects, but it wasn't nearly as clean/accurate as the TC box. Considering these are both in the "couple hundred" range, though, it might be worth checking out at your local Guitar Center.

Neil

Antares makes a plugin called AVox. I played around with it at a friend's studio a while back.

http://www.antarestech.com/products/avox.shtml

Lots of flexibility with shaping, doubling, chorusing and the DeEsser may be the best I've ever seen in software.

I was thinking of buying this but rather than providing them a crutch, I'd rather demean, berate and belittle the artist who sucks in hopes of shaming them into improving themselves.....plus it's fun to watch them squirm when their own suckage is evedent during playback.
..
(damn.....I just turned 56 yesterday and I'm turning into a grumpy old fart.....I need coffee)

;oD

Yeah, Neil, that's partly why i posted here. I thought Yami did one but I couldn't turn it up after repeated seaches all over the net. I seem to recall someone posting here with links to audio examples. Anybody recall? About 10, maybe 11 months ago...

W.

Yamaha has three versions of their Vocaloid: Miriam, Leon, and Lola.

Well... Happy B-Day Doug!

David.
