I've got a bunch of IDE drives here that I would like to be able to put in a case attached to one of my comps via USB and be able to access the data on the drives. I won't be recording to it, just archiving. Having 3 or 4 separate drives in bays would be a plus as well.

Any suggestions for a good unit?

Thanks,

Deej

HI DJ,
We've had good luck with these.

I've played with the idea of something like this on and off for a year now.
Surely they have a USB model.

This would be it:

<http://www.cooldrives.com/usb-external-enclosure-for-multipl e-drives-4x.html>

I leery of cooldrives though. I've got one here that works great as a
doorstop.

;o)

I managed to squeeze a Kingwin IDE bay into a Mapower USB enclosure. It sticks out a little in the front, but it works.
