Subject: AMD Opteron 175 vs AMD 64 4400 x 2
Posted by animix on Wed, 18 Oct 2006 04:34:43 GMT

Both of these CPU's are rated the same (2.2GHZ per core) and both are socket 939 and this particular Opteron does not require ECC RAM. what, if any, advantages would there be to running the Opteron. I've got a chance to pick one up at a very *reasonable* price. I'd be running it on a Gigabyte K8NS-Ultra 939 mobo. This is the mobo I'm going to be testing with Paris to see if Paris I can get multiple C-16's running onb a dual core CPU. I am considering buying an AMD 64 4800 x 2 for this rig but I'm just wondering if the Opteron 175 would be equal to or faster.

Thanks,

Deej
