Subject: Mr Audet - insert on mixer buss/routing mod Q's

Hello. I suppose this is directed to Mike.

I've been rethinking my master buss processing for mixing lately - in Paris. I know that when I pull up the patchbay, there are insert points for the L/R submixers. I'm wondering if there's a way to add this insert point on the software submixer for Paris plugins. ?

What I really would like is... say 4 or 5 busses with plugin inserts in front of the master buss insert. But just having an insert point on the submix masters would sort of lead me that direction.

Any thoughts?

TIA,
- Carl
