[View Forum Message](#) <> [Reply to Message](#)

There was a cool feature in the 2290 that would prevent the delay from sounding until the source signal stopped. Essentially it was a triggered gate on the delay signal. Anyone know a plug like that?

Any ducking delay will do the job. Here's one, I'm sure there are others.

I've got one of these.

<http://www.tcelectronic.com/D-Two>

I use it sometimes. It's a nice unit with more options than I have time to mess with (like most outboard processors) but it's fairly simple to use. I'm pretty sure the dynamic delay function will accomplish what you're talking about. It has a 2290 preset patch that has all sorts of permutations.

DJ

Hmm.....

Dynamic Delay

Get one of the most useful delay functions with the D-Two: The Dynamic Delay effect. Reduce the delay level as much as you like while the signal is fed to the Input, or enhance the delay level when the signal is at a lower level. When using this function you get a delay effect which seems to be present only where and when it does not disturb or interfere with the source

material e.g. in the pauses between phases from a vocalist, a guitar player or similar.

Delay Rule #1: If you need to duck your delay, you're using too much delay. LOL! :)

Seriously, though - Here's a free one:

<http://www.gvst.co.uk/dl070421/GDuckDly.zip>

I'm mad for dub, Neil, there is no such thing as too much delay.

I'm in the middle of a Chill Out CD, so likewise there is (almost) no such thing as too much delay.

[View Forum Message](#) <> [Reply to Message](#)

Hey Bill,

If you're doing that kind of project, two things to check out. The Tempo Delay from Voxengo (free and stupid cool) and the PSP 84 from PSP Audio. The filter alone in the PSP (and the brilliant way in which it is implemented) is worth the price alone.

Happy dubbing, and keep your copy of Scientist Wins the World Cup handy for inspiration. Oh, a lot of the free/cheap mod f/x--phasers, flangers, etc.--sound better stylistically for this kind of music than the 'good' and expensive mod f/x sound.

TCB

Wow, thanks for the great suggestions, amigos! My VST "Delay" folder has way too many choices now, now, now.

.....but have you spent a lot of money??? You need to at least spend \$1000.00.

I'll definitely check that one out, but between the Space Echo on the UAD board, the PSP 84, and a specialized Pulsar delay I'll be a little surprised if I find anything much better than what I already have. Still, one can't have too many delay plug-ins if you ask me.

Some of my favorite plugs are free: SIR, Classic Chorus, ALL my Delay plugs, Crystal. It's a good time to be alive.

I like to buy things for my wife.

I actually bought the audiodamage flanger and delay plug-ins. I'm on this crazy Big Star kick and one of Alex Chilton's signature moves is putting a HUGE mod effect on the backing vocals. I'm not sure exactly what the f/x is, and I think it varies depending on the track, but it's definitely really thick sounding modulation. The first two Big Star records were done at Ardent in Memphis when it was just getting off the ground, so I don't suspect it's anything terrifically high tech. Anyway, I haven't even installed them yet, but by the descriptions and the manuals they seem to be written by someone who thinks like I do and hears like I do.

I'll let you know what I find out,

TCB
