---

I am about to replace/reconfigure my PARIS computer system.

I will be using 3 EDS 1000 cards, maybe one more and using Windows 10.

I have been looking at a custom motherboard company called ADEK. Anyone heard of these people?

I have been given a quote on a new motherboard that comes with 4 original PCI slots, actually a complete system short of a chassis.

Of course, I am concerned about compatibility issues with PARIS hardware.

It will include an ATX LGA 1151 board, and an Intel i7-6700 quad-core 3.4GHZ 8M LGA 1151 processor with graphics 530.

A 326 chipset, 16g DDR4-2400 ram.

Do I need to know any more parameters before I commit? It's a pricey thing but I don't have the rackspace to use an additional PCI rack.

Also what is the operating voltage for an older PCI slot card?

Thanks

Gregory McNeer
