<http://www.greatidea.com/downloads/>

The valuepack includes the eq I'm pretty sure.

If anyone has a hankering to kix any bugs, and knows c++ they can have a wack, as the bugs are only in the control (UI) portion. There's minimal code to the controls, and bugs are 99% the result of bad math on my part.

The source code is all there in the same downloads folder.

You will need MS visual studio / MS Visual C++ 6.0 to build.

Chuck

.....and any way we can get (or purchase) the Sexual Chocolate and Evolimit plugins? Are these functional at all? If so, I'll gladly sign a release (or just Ghost my sys drive ;o) just to give them a spin.
