Ok, I got a A7N8X-E Deluxe ASUS MB.

Running one minute and crashed when on the internet

trying to download Bit Torrent.

On bootup it will mostly just give a black screen and never

beeping like usual before starting the memory test.

Everything seems to power up all the fans are going, keyboard lights flash,etc...

just no beep...nothing.

Ever so often it will beep and go to the memory test screen , but it freezes

there and doesn't cycle the memory it just freezes there.

I tried diconnecting the HDs, CDrom, NetworkWireless card, Memory sticks

one at a time....nothing seems to be the cause.

I was wondering if the MB is shot. The thing should boot and run a memory

test even if the HDs are bad correct? It should let me in the BIOS without

freezing correct?

Could something have blown on the MB?

Any ideas I could try?

Thanks,

b
