---

I can't for the life of me access the Cubase 4.0.1 update on their ftp site. Would someone mind DL'ing this and attaching it to an e-mail and sending it to me. I'm trying to use an outboard processor on a group bus in Cubase 4 and the delay adjustment doesn't seem to be working at all so I'm getting a bunch of phasing. Hopefully there is a fix in the patch..

Here is the link. I need the one for PC's.

animix at animas dot net

Much appreciated. If you do this please post to the group that it's done so I don't get 40 of these.

Deej
