Old technology meet new, my head is hurting but I'm searching for answers to finally get a PARIS rig working with my current setup.

Thanks,

-Will

Hi Will,

It should, but check with the motherboard manufacturer to be sure that the slots will take 5 volt cards.

I'm using an old Magma PCI chassis. It has a 3 volt host card that bridges to the 5 volt backplane.

I hope this helps,

Mike
