Hi all.. firstly congrats. for the reviving of the Paris's soul/s in such great work..

Secondly.. any known discomptibality/s between Paris (Pro.3) and Multicore Processors? I just got a new Intel Q9550 .. in an Asus P5Q MOBO.. with 4G.s of Kingtson HyperX 1066 ram..

Thanks alot in advance

It would be impossible to verify every combination of components, but there's nothing known about that combo having any problems. According to Mike, it should all be good - many of the older issues have been solved, PARIS is far more tolerant of different components now. Let us know if you run into any specific issues!
