Hi All,

This is a very minor change. I thought that the driver was throwing an error
at the end of long ADAT exports, but after hours and hours of debugging,
I realized that it was throwing an error because I set the end time past
the end of the tape. Doh! That should throw an error.

Anyway, I found that when PARIS is set to 44.1, the driver was assuming 48k
when setting the punch in and out times that are used in ADAT Exports. It's
fixed.

Enjoy!

Mike
