Have you guys & gals seen this new SSL software product that will convert
any session (EDL) into another format DAW sesion format.

If this thing works, this could be big?

SSL bought it from CuiBonoSoft - it was EDL Convert Pro. Works great for
converting
EDLs, OMFs, etc (I use v4 - it's a lifesaver). The word from a v5 beta
tester is that it does in fact convert PT7 projects to and from Nuendo XML
and works very well.

The support for PT7 transfers is the new feature to v5 that could be a
really big deal. Previously, due to Digi's lockout of
PT session formats from 3rd party developers, you could only go back to PT5.
Either CuiBono figured out 7,
or Digi sees the writing on the wall about customers' desires to move
between platforms and opened up the format
to CuiBonoSoft/SSL.

It's also now twice the price it was, but still worth it.

Regards,
Dedric

Hey Dedric, I too thought that it could not convert PT7 sessions, but as we just witnesses from Sonistates's video, it does convert PT7.. That's a break thru HUGHED!!!! And, that levels the playing field for alot of studios.

Dedric, I'm curious.How well does that software works?

It works quite well. There are issues of manufacturers (ahem... Digi...)
changing their implementations with new revisions
and causing headaches for everyone else - particularly AAF - so at least
with EDL Convert, you can convert to
a format the recipient app can open. It can read and open PT 5 and earlier
sessions (version 4 - 5 of course moving up to PT7); EDLs from most
everything (Sam/Sequoia, Sonic Studio, Vegas, discreet); Cool Edit
Pro/Audition .sess; OpenTL; AES31; OMF; Sadie; Soundscape; Tascam backup;
Wavelab, etc; and export to much the same.

OMF of course usually works fine with most major DAWs, as is without convert. But where problems occur, even running OMF's through it can clean up variations in implementation.

A notable downside to OMF and AAF are the legacy dual mono format Digi forced on the world. Projects with interleaved stereo
files are always split (per OMF specs) into dual mono. AAF is supposed to support interleaved, but it also splits interleaved files.
Not EDL Convert's fault - just a legacy spec issue that is only now, slowly being recognized as such.

Thanks. I suspect Digi will once again encrypt it's session files to keep
their product exclusive..

HI Lamont,
Thsi software was the best thing over all I saw and SSL where barely pushing it. Maybe it's because the Digi Booth was close. :)

Saw Tascam's GVI4 on a MAC and the beta for Giga 4.

Giga 4 seems to have addressed allot of stabilty issues, i.e., Quick Sound.
Looks worth looking at again.

Thanks Chris for the update..I hope GVI 4 is better than the current one.
I purchased GVI 4 months ago and 'cringed' when I use it..

At least you got your G3 to work. I'm still battling that crap months later,
it thinks it's a timed out demo.
Grrr.....

Hey Aaron, No easy feat,LET ME TELL YOU! :) To get GVI going, you must delete
all incarnations of GigaStudo, Gigasampler (Folders, drivers, dlls..everything).

Then, reload GVI.. Note: GVI and Gigastudio cannot reside on the same computer.
