Subject: So I've been thinking about Paris buss compression and........
Posted by animix on Mon, 25 Sep 2006 03:45:43 GMT

........oh man..........my life is already a living hell......but......if you
had 8 x PC's, running Win 9x, each with an Opcode Studio 64XTC, could
timeline sync 8 x paris systems. That way you would have the global insert
on each one for compression and EQ and then you could sum the main outputs
of each to something like this:

http://www.manleylabs.com/containerpages/16_299.html

..........hehehe!!!!!

Man.....it's time for me to stop drinkin coffee.
