---

Despite that little scare we had where everything became unstable for a bit, it seems now that the UPS is holding out.

There's definately something screwy with the power in these parts though. This morning for example the UPS was beeping, complaining that it had no mains power supply. Mind you my DVD burner was sitting there operating without issue, as was my stereo amp. I can only assume we dropped down in voltage by 10% or something... enough to upset the UPS into taking over, but still enough mains to supply most appliances. It only did it for around a minute then came good.

In any case there seems to be no immediate need to buy a new one. The router has crashed a couple of times, and I'll need to upgrade the firmware soon to fix that. The latest firmware (which I'm not yet running) seems good, but I'm waiting for the next bugfix release before I jump on board with that one though, as firmware upgrades mean a bit of stuffing around. Once I do the next upgrade I want things to work without issue for several years.

It seems this pocket of the internet is running ok though for the moment...  
...which reminds... should do a backup.

Cheers,  
Kim.

that's pretty much what mine did prior to it's death.

rrrrrrright. ;o)

Well then, we'll see how we go I guess. I'm still suspicious there's something going on power wise though, because I do get regular glitches which cause the microwave and other volatile devices to lose clock settings etc. That doesn't necessarily mean that my theory of power fluctuations causing the beeping this morning holds though.

Gee, you've made me all paranoid now. ;o)

It seems to only do it in the morning though. What's with that? It's happened maybe 3 times, and each time while I'm getting ready in the morning. I've never heard it happen when I'm home after work. Seems against the odds given I'm usually home (and awake) of a night for maybe 6 hours, and only for half an hour in the morning. If it was random I'd be more likely to hear it at night. Unless the UPS doesn't like being cold...?

Hmm...

Cheers,  
Kim.

Now if only women were that accomodating

(did I say that out loud?)

Don

I mean look what happens I make one remark about the system running smoothly,  
and DOWN she goes... ;o)

Cheers,  
Kim.

In going down? Or touching wood?

What am I saying... it's not THAT kind of group! ;oP

Cheers,  
Kim.
