Getting this error/crash everytime I close Paris and sometimes a bluescreen or loss of video resolution.

I have the card in slot 3, using the Matrox 450 video card. I also reinstalled Paris(3.0) to the C root drive.

Any help appreciated.

Thanks,  
Edna

I had a similar problem when closing the program, and I finally narrowed it down to having a combination of stereo and mono native effects on adjacent tracks. After I deleted that effect combination, the problem immediately cleared.

Yes, installed to C:\E-MU\Paris Pro

Hmmm. . . I don't have any native effects loaded, in fact this happens w/o even loading a project. I have waves dx plugins in the native effects menu, but none loaded. ???

Greetings.

Have you installed chuck's effects subsystem fix (the one that comes with "wires" \*and\* made sure it is installed into the same directory you installed Paris into?

Hi,  
Root is not C:\E-MU\Paris Pro  
but C:\Paris Pro.  
Also DELETE the old folder in Program files because you might wrongly have  
the shortcut on you desktop refering to that !  
If the above don't help.  
Put inside your registry what I have posted in XP Paris tweaks...  
Regards,  
Dimitrios

WOW, Chris!  
Now THAT is something I will note and experiment with.

Funny how this problem NEVER happened in '98.  
Perhaps your suggestion hints at the "magic bullet" fix, which  
Chuck may have come close to, but not entirely, fixed.

Actually, come to think of it...  
Chuck's subsystem fix did cure the "unhandled exception" problem  
on exit for me.  
(Sorry Chuck, mouth in gear, brain in neutral).  
I had problems \*opening\* projects with lots of plugins.  
Dimitrios's tip helped that.

Hi Chris,  
Can you be more detailed ?  
You say combination of mono and stereo native effects on adjacent tracks.  
How can this be ?  
If I understand lets say you put waves rvox on track 1 (which is mono) and  
then open a stereo waves rcomp on tracks 2 and three ?  
Is that what you mean so to cure you should leave track 2 without native  
effects and put your stereo on 3,4 ?  
Then also put nothing sort of mono native effect on track 5 but continue  
on track 6 ?  
Crazy but is that what you mean ?  
Thanks  
Dimitrios

Hey Kim,

Which of my tips cured your error in opening your Paris project ??

We need all your input here from all of you to gather the workarounds to Paris "features" as Brian T was referring to...

uninstalled Paris and reinstalled to C:\Paris Pro. No effect. Still get the c0000005 error. Did the reg tweaks, still no effect. Removed all native plugs, no effect. Disabled network card and USB in bios. It gives error everytime immediately on closing Paris even if no project loaded. I'm stumped at this point. MB is Abit NF7-2G with AMD 2400+ and nvidia geforce 2 video card. 1G Ultra ram.???? Never had these problems with Paris on my P4 system.

FWIW, I never see this kind of issue and I install to C:\Paris3.. note there are no spaces in my naming.

Well it seems to be working fine now. I removed the 1G stick of Ultra pc3200 cl3, and used 1 stick of Geil 256MB cl2.5 memory???? This did the trick although I can't imagine why (thanks Kim). Also got the nvidia 6200 video card working (thanks AA for the tip on uninstalling the video drivers of the old card). Is 256MB sufficient for running Paris on? I haven't tried recording yet, but playback is fine.

Thanks much all,

Edna

That depends on what OS, what else you load at start up and if using XP how far along the 'patches' are. My paris rig is stripped so clean about 80 MB is used at start up. However, my daytime gig dictates all the latest releases of patches and business apps and those machines start at over 300 MB usage.  
Open your task manager and see... is it using more RAM than you have physically? Here is your guage.

I see. I'm using xp pro and sp1. I haven't used any patches, since I'm only using it for Paris. Where does it show how much memory start up apps are using?

There are a few apps I'm going to remove like Nero and Fruity Loops, etc. Some dx plugs from these two apps were being picked up by Paris till I hid them. When Paris began working, I unhid them and Paris picked them up and once again I was getting the c0000005 error on close. Rehid them and error went away. So there were two factors in my case causing this error. These plugs, nero resize, and FL plugs are not even functional in Paris, but I'm not sure how to stop Paris from picking them up other than to uninstall them.

Thanks,  
Edna

Hi,

To stop Paris using them just move them from your vst directory or better open inside vst directory an new folder and put them ther, Paris won't see them that way...

Regards,  
Dimitrios

The app is in English.

It's terrific, and FREE!
