Hi all,
I've just loaded up my new Windows XP machine with Paris 3.0, and (in anticipation of an upcoming session) am looking to purchase the right version of Antares Autotune as well as Wavelab.

Is anyone here running these on an XP machine with Paris 3.0, and which version do you recommend? Any help would be appreciated.

Thank you!

I just read an old post about Antares 1.3 working - does anyone know where I could find a copy for sale?

Thanks,
Tom
