Well thanks everyone, I have a better handle on the ADAT Card for Paris, now transport sync.

I used OMS on my G3 which had a multi pin port sending MTC to my Mac man midi i/O. I think I still have the software (opcode OMS) But I am using a G4 now and it only has fire wire and USB. Dont know if opcodes OMS will find either of those ports. I'm trying to sync the Paris transport with a Digi 002, any ideas?

Michael,

You just need a usb midi interface on the G4 to recieve mtc from the macman midi i/o.

respect
