Subject: Paris reacts DIFFERENT under Me opposed to XP !

Posted by [Dimitrios](#) on Wed, 03 May 2006 14:25:35 GMT

[View Forum Message](#) <> [Reply to Message](#)

---

I made some heavy tests here...

Paris eds effects react different (sound different) under Me than in XP.

Now that is most interesting.

I checked with a B3 file and Big Eq from Paris.

Turning all the way up to 20 under Me gave a fat distorted sound.

XP !

Overall Me (well Paris under Me) sounds fatter and distorts more easily...

Please if you have a second bay disk with me and Xp try a file to hear what you get ...

I am very very curious and shocked...

Regards,

Dimitrios

In order not to confuse anyone here is my exact test.

On a four card Paris system I loaded a B3 tune for 3-4 seconds playing in aloop on a Paris audio track.

I pushed the level up to 10and had submix -8.1

I was monitoring via monitor outputs and had the monitor level -12.

No on Paris BigEqI had thsi filter highpass at 260Hz and lowpass at 5247, trimmer AT FULL 20 !!

This makes all the diffrence now beetwen Me and XP.

Under XP even at +20 the sound becomes nowhere as distorted (well bad distortion) and the volume stays overall the same as with the BigEq OFF.

The trimmer works because lowering it the volume lowers itself too.

Now on Me with closed EQ we have the same sound (is it ?) but when eq is engaged with that full +20 there is sever distortion and loudness and fatness.

Go figure...

Can please someone with both XP and Me partitions check this please ?

When I was first using Me for some months and then switched to XP I remember that the sound was different to my ears but I said to myself well, yor ears must be wrong...

Now that makes me wonder if many things act differently under XP!

Regards,  
Dimitrios

What's Paris "Big" EQ?

I think I remember checking this when I switched to xp and the files nulled  
(I'm pretty anal about this stuff)but it's been so long I can't say for sure.  
The memory starts going. If I get some time I will check it again.

Just to be clear. there is the Paris eds eq, Paris vst emulation of the eds eq (by Matt Craig), Freak Q, and Barb-A-Q. Which of those are you talking about?

Thats right !

We are talking here about the Paris graphic eq.

I would like anyone's input here.

I have made the test almost ten times !

Changing the cad disk bay from XP to Me and loading the same project on both...

Regards,  
Dimitrios

I don't understand how the OS could make a difference at all  
with regard to the sound an application produces.

Not calling you a liar, but I sure would like you to elaborate  
or provide some kind of basis for your statements if you can.

Well,

It is something I could not also believe it could be happening...

But what about facts ?

I described as much as I could the exact test I made.

It could be that the fxsubsystem you know the minimum setup somehow makes thing act differently.

YOu are aware that the XPdrivers are a user's contribution.

I just found that the Paris eq output trimmer acts differently under Me as opposed to XP.

Could it be that the project is corrupted under XP ?

Don't know, the only thing I know is that there is atremendous different behaviour here.

Because though I also cannot believe that the different OS could make things sound different just because everything happens inside Paris which is hardware, thats why I kindly asked for anyone using both XP and Me to just try this with the EQ output thing.

I really really would want to be wrong here, I eman I hear what I hear but I hope that my project has a "bug" in it and so Me acts differently than XP.

Please don't get me wrong here but I would like to sahre any of my findings right or wrong.

Hope noone gets annoyed with that...

Regards,

Dimitrios

Me neither, I'd go as far as to say...not possible.

Hi,

I have doublechecked what I was saying.

I can prove I am right with the attached files.

What I found is happening is the following:

Under Me only when you hit +20 on your BigEq (Graphic eq you can here a somewhat distorted sound.

Now open your first EQ slot (at your left on your Bigeq) and put a highpass at 260hz.

Now you hear super distortion !!!!

This does NOT apply for XP.

Soone thing I proved here i9s that Paris BigEq FIRST ONLY Eq slot of BigEq ACTS DIFFERENTLY.

Please before saying anything that underestimates my efforts regarding the above if you are on Me try it...

Hope this opens up a new concept for further investigating Paris.

Don't you love that ??

Regards,

Dimitrios

Since they have different drivers is it possible that they introduce some change in how paris runs?

Sound like the level is hotter on the XP file. This might be reaching a bit, but have you verified that the levels (pro/semi pro) on the MEC module are set the same between the two. I know that they are saved with the project, but could XP somehow be loosing the setting? Have you tried toggling it back and forth just to see?

Hi,

Again to not confuse anyone as I do sometimes I guess, aferall English is  
not my native language...

I just LOADED in the audio bin one wavefile.

So there is not any recording involved.

Secondly, levels are the same under Xp and Me ONLY the BIGEQ FIRST EQ SLOT  
has this "bug" or feature ??

When you select HIGHPASS and put something around 250hz ( I know it will be the same for other frequencies) and the output level is set at maximum, UNDER ME there is a HOT HOT output well into severe "tube" distortion thing as opposed to XP which remains natural (well some distortion there too).  
PLease note ONLY the forst EQ slot behaves like this !!!  
I could not replicate this effect with other eq slots.

Yes I believe the Paris drivers may make Paris act differently, maybe XP drivers are better ?

Well I don't know what other things "sound" different beetween the two but I am willing to investigate.

Hope this helps a little bit more.

Regards,  
Dimitrios

I wouldn't go that far just yet.... Paris interacts with the OS level in different ways for sure. Take Direct X and VST for example. Or that the XP drivers land in a different spot in the hardware manager. How that would affect Paris internal EQ I don't grasp at this point but I can't rule it out.

Got my interest D, keep going man.

Dimitrios, just to be clear.. you are inserting the Paris VST EQ into a native slot, only on the 1st slot does this phenomenon happen? Does it change if you move channels around? I noticed that in XP the aux leak bug seems to have died a deserved death, and I'm wondering if this is somehow related.

Dear Aaron,

I arised misunderstanding here and a huge on !!

NO PLUGIN neither native nor EDS !!

Just PLAIN Paris onboard eq.

You know the graphic eq !!

Whatever else you have found on XP that is strange opposed to Me please take note.

We have to gather that info.

I hope I made a little bit clearer now.

right ?

Rgards,

Dimitrios

Dear Aaron,  
I arrised misunderstanding here and a huge on !!

NO PLUGIN neither native nor EDS !!

Just PLAIN Paris onboard eq.  
You know the graphic eq !!

Whatever else you have found on XP that is strange opposed to Me please take note.  
We have to gather that info.

I hope I made a little bit clearer now.  
right ?

Rgards,  
Dimitrios

Ok, so you're finding this difference in the Graphical EQ built into Paris..... what reference to the first slot do you mean? On the first channel/track perhaps?

AA

Dear Aaron,

Yes the onboard graphic eq.

When I said first eq slot I meant ,sorry!, first band eq from the four Paris eq has.

This is the very first as seeing it from the left.

I hope it is clear now...:)

Regards,

Dimitrios

Not completely yet..

You are using the first EQ band reading left to right in High Pass mode at 250 Hz and pusing the EQ Gain to +20 dB?

Is there a specific track/channel you are using, and if so, have you tried this on other channels / EDS cards as well?

AA

Dear Aaron,

Exactly "extra Me" distortion occurs from +19 up to +20 ,so only on +19 and +20

I tried on first audio track submix1 I try on others and see

Regards,

Regard, Dimitrios

Dear Aaron,

I tried on other audio tracks on same eds card and on all other three cards

I have (total four) all act the same distortion under Me.

Are you using Me ?

If so please try ...

Regards,  
Dimitrios

OK, I have been out of the loop since yesterday. I'm going to give this a try today if I get the chance, since I've got duplicate ME and XP drives in a removable bay.

I remember a couple of years ago (maybe more) involving BT and Sakis (I think) about this very bug in the 1st freq slot of the graphic eq.

I'm full on XP here, but I have a removable sled. I could build another drive if today goes like I think it's going to. (Home sick)  
You got the same result all over?

Is it just me, on a side note, or does the backwards EQ implementation still make anyone else nuts?

Dear Aaron,  
Yes all over !

I know this finding might seem as unusable but this is an indication to me  
at least that Paris reacts different under Me than XP.  
So maybe except that extreme Eq setting there is also subtle difference in  
sound when using onboard effects as well as DX/VST.

Regards,  
Dimitrios

What do you mean by "backwards"?

D....I did the test. Your right man, xp doesn't distort the same way as ME on the setting you described. I'm still testing, but I can hear the difference, it's pretty big. I tested on eds 1 and eds 2. Same result. I will post later after I test more and do some nulling tests but, I can tell there's a difference right now.

Oh yeah, I double checked my outputs. they're the same on ME as XP. I'm using the spdif out into a Benchmark DAC, word clock'd to a Lucid GenX. The only difference is, I set my Monitor outs to zero, (I use a passive volume control for final level) because I thought your -12 might be playing into the equation, but it still was a WAY different type and amount of distortion.

Good sleuthing, dude!

How interesting this is. I've been using ME exclusively for over a year now due to the necessity of having multiple ADAT modules per MEC. I always thought that Paris sounded a bit different when running it on XP but I had added a DAC-1 to my studio around the time that I started using XP and I thought that was the reason. Then I added a WC and the sound changed a bit yet again. When I went back to ME, I noticed something that seemed a bit different. It wasn't significant enough to affect the way I was working and I thought it was just my imagination.

When running Linux it sounds like European communists have infiltrated the mix with their evil intentions.

I thought that Paris sounded a bit more \*accurate\* when using XP and the response of the converters seemed snappier (dare I use the term \*faster rise time\*?). I liked the way Paris it sounded with XP as I was primarily tracking/mixing acoustic material in low track count mixes. I also like the sound I'm getting with ME, but man, it's been so long, and Alzheimers has started setting in now.

;o)

Hey DJ,

Nice you think about so.

Can you say though what was your liking Me or XP ?

Regards,

Dimitrios

Rod,

IIRC, to me, it was more about the \*feel\* of the app under XP than a huge difference in the sound.

DJ still testing, but I did a mix bounce on XP and then on ME, no fx but did have eq's on. about 30 tracks. I thought it was totally nulled, but there is some difference Waaayy down there that became audible when listening with everything (Passive volume and Paris monitor knob) all the way up. But I'd say for all normal purposes, it nulled.

.....and, if I could get multiple ADAT modules working properly in 3 x MECs, I'd likely be running Paris on XP. I liked it.

Aaron / Dimitrios,

Brian Tankersley used to say that the first EQ band (the yellow one) should always be used as a last resort, because there was a known bug with it. This was under WinME.

I remember mixing a project with him and seeing him EQ "backwards", using the yellow (top, EQ1) EQ for a high pass, and using the green (EQ2) for low mids, blue (EQ3) for hid mids and white (EQ4) for highs. If you look at the console view, this seems completely backwards from the typical layout on a "real" console, and I asked him.

He said that there was some bug that made EQ one unreliable at high boost / cut levels and that he really only used it for small adjustments when his other EQs are gone, or as a highpass for the channel.

The last time I worked with him, he was using WinXP and still was EQ'ing in this "backwards" fashion - I assume it was still because of this bug...

Sandy

This may be the case, but the difference, if any, must surely be in the XP implementation of Paris and NOT XP itself.

The OS cannot have any impact, the program may.

hi to low instead of low to high.

I've got a template that comes up with it 'corrected' and how I want to view it. I don't remember where I picked it up, but probably off of BT like Sandy was talking about.

I guess I shouldn't assume everyone did the same thing as me, my bad.....

AA

Sorry D, I fell over and died today... ick, infections suck.

I made it as far as reformatting a drive. I'll locate drivers/install yada yada and move ahead when I'm up to it a little more. I expect to find the same thing as you, however methodical testing is the answer.

I can lay down a 98se partition or a ME for testing purposes.. any preference before I start loading?

AA

When you're asking, you came to the right, old place. I have the whole shit here somewhere. It must be under all the Microsoft dust. So where was that dustcleaner? Maybe you need something DOSdust with it too :-)

Cheers  
Erling
