16:9 not 16:10 like the Gateway. I'm not sure about Gateway quality.

Tom

I'm on ONE 15" lcd that I bought for \$1000 about 6 years ago. Boy do I

feel stupid.

I wasn't aware that any of the ISA video cards would run at that resolution.... ;-)

David.

Yeah, i just found that out. Mine runs at 1280x1024 and I guess now I need a new agp video card. If i get the gateway 21" with 1680 x 1050 is there an AGP card I can get that will do it and can I get the DVI cable in a 30 ft length? Seriously.

I said ISA... guess you missed the joke! ;-)

1680 is pretty tiny, even at 21"... what is the response time on that monitor??? if it is more than 10mSec you probably wouldn't want to go with that resolution. A 30' DVI cable should be available through some of the on-line cable suppliers .

David.

If I go for the Gateway 21" model what's a good cheap video card for Paris preferably dual head. I saw some at Staples with 128mb ram for \$80. That should be plenty of ram for Paris video yes ?

Ok, so DJ 'made' me buy the Gateway 21". Now I get it home and my win98se does 1600x1200 and even higher resolutions but this monitor only does 1680x1050 and 1440x900 and other crap that mine doesn't do.

Is there an AGP video card that works on win98se and does 1680x1050?
Otherwise I have to take it back. It only does 1024x768 while showing my taskbar, any higher and it goes off the screen.

Thanks,
John

computers suck

Not only is an expensive card required but it appears to ONLY be in PCI Express form and not AGP so I also need a new computer and oh yeah it won't support win98se either. Oh well, it was fun dreaming. Back to the return counter. It's a good think staples and office depot don't charge restocking fees cuz circuit city and best buy do and I would have lost \$90 due to their lack of knowledge of the product they are selling.

double fawk

John,
Call it a \$90 lesson you got for free.
Such a deal!
Tom

"John" <no@no.com> wrote in message news:441ca90b@linux...

Not only is an expensive card required but it appears to ONLY be in =
PCI=20

Express form and not AGP so I also need a new computer and oh yeah it=20
won't support win98se either. Oh well, it was fun dreaming. Back to=20
the return counter. It's a good think staples and office depot don't=20
charge restocking fees cuz circuit city and best buy do and I would =
have=20

lost \$90 due to their lack of knowledge of the product they are =
selling.

John,

Sorry you had such a hassle with this. It sure looked like a good thing =
on the face of it. WTF does everything have to be so friggin' =
complicated with this stuff I wonder.

Thanks for saving us all osme grief.

;o)

So this thing just won't do 11600 nx 1200 with a Matrox G450?
That's all I would need.

It does not support 1600x1200 which my box DOES do. BUT.....I
returned it and when I did I checked out the Gateway computer and it the
computer DOES go to 1680x1050 and it looks incredible.

So...I checked out device manager and it's using an onboard Nvidia
Geforce 6100. I'm trying to find what motherboards have that chip cuz
it doesn't appear to be a card they sell and I'll just swap the

motherboard out because this display is really georgeous. Off to searching motherboards now.....if anyone finds some MB's post them here please.

And what do you think the odds are that this motherboard will run win98se. I have yet to get Paris stable on XP. I wish it worked for me.
