1. Anyone know of the other wrappers that work in Paris? I have FFX4 which works fine, except it keeps telling me to reload .dll files for VSTs it says are there, even though I have taken them out of the folder that the FFX4 points to. Is this a registry issue? I'm new to PC... If it is, where do I find the registry to remove the "memory" of them?

I have rescanned multiple times with the FXPansion VST-DX Adapter, but still get these listings as if plugs are in the VST folder, even after I've removed them.

2. Anyone know what the latest version of Waves plugs can be run in Paris? I've got up to 5, but 5.2 up to 7.1 won't load...

OK - Sorted it out. Found shell2vst which seems to correct Waves load issues for a bunch of different daws.

Very nice.
