There's a "Mixtravaganza" kinda thing happening over at 3dB forum. I figured I'd bite and compare my mix to other *proper* mixes and see if there was any audible sonic horribleness with the *improper* scenario I'm using wherein I'm taking files that are processed in Cubase SX at 32 bit float, truncated over Paris ADAT, then summed in Paris at 24 bit, then IDR'ed in Wavelab to 16 bit, then further mangled to MP3.

I'm thinking I'm not going to think twice about this any more, ever.

Thanks to Neil for hosting this:

Thanks Mike,

We can thank the UAD-1 Neve 33609 and the 1081 for the bass and snare mojo.

I knew if I didn't get those I would.....well.you know.

;o)

O'yeah.....and the 1081 and NoLimit on the vocal.
;o)

Very fine DJ. A place for everything and everything in its place. Man, the cream is that bass. You nailed it. Lots of phat and lots of tonality. Its so damn hard to get bottom AND be able to hear the tones. Very nice. I also liked the sizzle on the overheads and the snare sound as well -you could really hear the stick hit the "meat" of the head. And of course, the vocal: right in its own place too. Nicely done.
Rock on!
MR
