Ok, this thing is nearing completion.
I need to make a door for it and seal it.
Does anyone have a recommendation on what type of seal and or design to use.
A quarter inch seal would work best for the existing design, but I can alter
it to what ever need be.
I was thinking of just making a wood door out of quarter inch ply
and sealing it with some sort of weather stripping. I was thinking of a compression
type latch.
So the entire door will be removeable.
thx,
b
