I had a computer meltdown with my Paris machine that ran flawlessly for 3+ years on WinMe. I started out building another Me machine, but eventually realized that I should take this as an opportunity to move forward and switched to XP and never looked back. Two thumbs-up from me.

I guess the title says it all. I'm still running Win98SE, but it seems a lot of new software runs only on XP. In particular, I'm looking at the Waves Q-Clone thing.'

If this is truly viable, where might I find a FAQ on setup fo the XP environment?

Thanks for any help.

Hi Gary,

It runs with just as many bugs as it did with 98SE and ME only different bugs. :)

Actually it runs quite good. You should make sure that the machine you are using now is able to run though.

Looks at [www.musicxp.net](http://www.musicxp.net) for great guide to installed and tweaking XP. Also look at the <http://www.parisfaqs.com/> for the right and only way to install Paris on XP.

Chris

If you need to interface with ADAT machines and/or are using multiple MECs and wanting to use more than one ADAT card per MEC, you will not like Paris on XP. If ADAT compatibility and using multiple ADAT cards per MEC isn't an issue with you, Paris on XP is great, IMO.

Speaking of which, has anyone got two ADAT modules on a single MEC working with XP?

Chris Ludwig got two ADATs in one Mec with XP to fly for a friend of =  
mine but it=20  
wasn't easy as I recall. Brian did too. I think it has to do with  
the order that you install the cards from the initial install among  
other things. DJ almost did I think.

I was successful with 2 x ADAT cards in the MEC attached to card A and 1 x ADAT module in my two other MECs. Never could get more than tht to work.

DJ, I recall that you are using Mytek converters. Is this through the ADAT I/O? Is the hit from 24 bit to 20 worth the better quality of the converters?

Thanks

Chris,

Have you installed SP2 on XP, and/or does it have any negative impact on Paris. I've been holding out, taking the "if it ain't broke, don't fix it" approach.

Hi Ted,  
No I Haven't. I don't see any possible impact it would have on Paris.  
Other than the Pace copy protection needs to be updated to the newest  
version before you run paris. [www.paceap.com](http://www.paceap.com)  
SP2's DEP features don't play nice with Pace shit unless PACE is  
updated. If you are using some old direct x plugins you might have to  
update them. But that would also be the case for SP1.

Chris
