trios

>

>Note that newest senderella version has a redirect option which is great that lets you either hear the sending channel or you can just lower or even mute the sender.

Alos you have a send volume for each sender.

The perfect situation for realtime 0 latency drumbus compressing is to use senderella on each adrumtrack you wanna compress and then on senderella's return track you can apply a Sonalksis DX multiband compressor which is 0 latency !!!

So even a EDS compressor would shift the compressed drums by 2 samples. I am amzed with Sonalksis 0 latency multiband compressor and 0 latency EQ

Regards,

Dimitrios

>Hi,

That was tough.

You copy your drumtracks to the same EDS card.,
say you have your kick ,snare and stereo OH's.

So you copy these on empty tracks.

then you put the senderella on each of the first set of drumtracks and
redirect inside senderella so that the sending audiotrack does not output
any audio.

you nudge these tracks by 4096 samples forward using any method known if you
use Soinaudio wrapper for UAD1, if you use FXpansion you nudge for 16384
samples.

Then on your reciving audio tracks (you put empty audio file (24bit track)
just after the senderella audio tracks.

I mean if kick is 1 snare 2 OH's 3 & 4 then put the receiving senderella
track on channel 5 and just put the copies of 1,2,3&4 on 13,14,15,16

The remaining drumtracks could stay on 7,8,9,10,11,12 if you have that many.

So now the senderella return on 5 takes the LA2 UAD1 compressor and time
alligns with audio drumtracks 13,14,15&16 and as well with 7,8,9,10,11,12.

I have also a UAD1 but I would prefer using the Sonalksis which is 0 latency
so I don't have to copy and move, anyway here is a working solution

Regards,

Dimitrios

e the Paris EDS card.

Martin...

Do the EFX sound good? Is part of the benefit you find that it reduces CPU load as opposed to using Native plugin's in Nuendo? Also, what about the summing... are you bringing stuff out of Nuendo to sum in the 1820 (and if so, does it act/sound like Paris in that regard)? And finally, are you using it on the same computer as Nuendo?

NeilD, what's the default transfer...if you don't type anything?

excelsm@hotmail.com I love mine, too. My only problem was that ugly brown shell they use. But a good drummer friend of mine who paints custom cars painted it a cool red with about 40 layers of subtle orange, copper and yellow flames that appear and disappear as you move around the drum... It even sounds better :)

gl've gotta do this sometime.....

I've probably got that many old fans laying around here, though I would need
a new PSU.

;o)

Nah... it'd be a hint of cotton, not leather - since that's what
nitrocellulose is a derived from.

:)Problem is, if they are all aiming inward the thing would explode! ;-)

David.

>Hey there,
the only other thing that I would want to add is a remark that I B.
Tankersley made at some point. He said something to extent of him playing
around with some Native Beta Version of Paris that Edmund had started
developing, and that he had concluded that the ensoniq hardware had much to
do with the great sound of paris. I'm pretty sure that I remember this
accurately, but I am not about to swear by this !!!
Ted

I am trying to get a sense of the difference between the Paris EQ, the Waves RenEQ and this bad boy ...

Any adjectives you would be able to share in this matter would be greatly appreciated.

Thanks,

Greetings :)

Siwei Zou (Soo-Way) the founder of SE Mics has been hard at work in the Lab. This time , its all about Ribbons.

As many of you may be aware - Ribbon mics have a very different response than conventional condenser mics. As a result , Ribbons capture sounds in a very different way . Many engineers and producers use Ribbon mics on guitar amps, brass instruments , string overheads and a variety of situations where High Frequencies tend to be to brittle using conventional mics. Distorted guitar is one of the best examples. Quite often one tends to EQ the heck out of the track causing untold Phase damage rendering it unable to sit well in any mix. Using a Ribbon is prefect in this situation , the mic captures the sound naturally - thus allowing the guitar to sit perfectly well in the mix without any nastiness or brittle high end trash that one usually expects.

A brief overview of Ribbons - RCA was known for developing some of the most popular Ribbon Mics the RCA 77DX and RCA 74B.

The vintage ribbon mics are Dynamic and use a 6 micron membrane, and there are a number of low end mics that also use 6 micron. Developments in the last 10 years have allowed thinner diaphragms to be practical to produce and the newer more expensive ribbon mice have diaphragms ranging from 3 microns to 1.8 (about the current limit). The thinner diaphragms offer better impedance matching and superior high frequency response. The inexpensive Ribbon mics often to have a higher impedance which this does tends to make them low in output , a significant drop off in High Frequency,a bit noisy and quite sensitive to cable length and load from a preamp. Finding an optimal combination can be a challenge.

The most popular Ribbon mic presently has been the Royer 2.5 Micron membrane Model R-121.

We have measured the impedance to be @ 470 ohms (as opposed to the published 300 Ohms)

These mics sell for Approx \$1200 each

http://www.royerlabs.com/r_121.html

SE has used Royer among many others as a benchmark. In doing so, They started out with a

6 micron Membrane Dynamic with the Clear goal of doing everything Better than the rest.

Better High Frequency response, Higher output, Lower noise and Lower impedance - 200 Ohms to be precise.

I Have Wave files recorded of the 6 micron prototype and 2 micron final production model that I can email and or post.

SE managed to completely knock the Ball out of the park with this. And in doing so , they have perfected the process of making Ribbon Membranes better than any competitor. More on this amazing new process to follow.

They did not stop here , Even through they got the 6 micron to have very good performance they decided utilizing the 2 micron ribbon just put the performance over the top and went with it for this new amazing mic.

The All New SE R-1 completely smokes the Royer as well as all others and here is the best part.

At half the price !!

The New SE has a list price of \$ 749 and streets out @ \$ 599

The special (St. Peter) PARIS Pre-Launch group buy is \$ 568.88

Included with this mic is a Planet waves Premium 20ft Mic Cable, Deluxe Road case and shockmount.

We will be able to deliver these in the first week of October - Reserve yours NOW !

As with all SE mics - there is a 7 day NO RISK full refund Guarantee !!

These Mics will Premier @ AES in a few weeks - My prediction is these R-1's will be one of the Hottest Items at the Show. You heard it here FIRST !

Haven't bought one yet. The EDS plugin that Chuck created (can't recall the
name)
can create a similar effect w/ a 50 Hz tone mixed in w/ the kick... Also can be
tuned
to the key of the song!

Gantt

I know that anyhow EDStransfering or not EDS cards run hot so to be on the
safe side it is better to add those little chip coolers.
I guess those Ensoniq chips are the candidates here...
Regards,
Dimitrios

-----=_NextPart_000_0056_01C5C06B.1F9E7840--Here are my big questions. Are you sure you
want to buy another product
from EMU?????? A company that has a history of canceling products with out
notice, with out an upgrade path, and just drop support cold????? Lie to
their customers!!!!!!!!!! Lie to there dealers!!!!!!!!!! All to make a
buck!!!!!!!!!! Are you sure you want to invest in to another piece of PCI
hardware, when there are other choices out there? This system is limited
in its expandability! Are you sure it sounds that good?

Are you sure you want to reward a company that has screwed us all over, by
making them richer, by buying another product from them??????????????????

These guy should have been sued!!!!!!!!!!!!!!!!!!!!!!

Fuck EMU!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

You already own PARIS!

Stick with PARIS!

It's the one on the right;)Cant tell you the answer to that one Neil.
Most programs will not let you access more than one card, unless from the
same manufacturer, and then, only some cards that are identical.
I guess there is no reason why the effects can't be used though.

w. Pro-tools, kinda like Sony's Betamax VCR lost the war to VHS. The 'better' formats lost--and investment stopped...but you're right, those who spent the \$\$\$ should not have been abandoned by Emu. Maybe Creative just wanted Paris so they could steal some of the great A/D converter stuff for Audigy!

I'm also considering the portable convenience of a Tascam 2488, tho' pretty sure it won't sound as good Paris.

Thanks,
Kim

AAThe 1820 is a good sounding card esp. for the money. The drivers may not be quite in league with RME and Lynx, but I installed a couple in A/V media systems and never had a problem for that use. They would do quite well with a \$500+ 8-channel ADDA unit using those converters.

If you are looking for a DAW alternative to Paris, there are quite a few great options.
