Sometimes my Aux EFX (such as room reverb.plate reverb or compression),will sound,even if that channel is not assigned to that Aux...So I might hear reverb on a channel,whether I assign it or not...It goes away if I assign the main Aux send to (no effect)..Anybody else have this happen?? If I totally shut down PARIS and start over,it will sometime correct itself...

Sounds like the infamous Aux leak.... only happening on aux 1?.. or was that track 1, darn I can't remember.

AA
