Subject: What's the longest scsi cable I can use for MECs? Posted by pbraun on Wed, 07 Oct 2009 05:22:09 GMT View Forum Message <> Reply to Message

Planning out how things will be arranged with the new rig, and allowing for future installation of the pcs on a rack outside the planned studio walls.

I'm going to need 15' video, usb, and firewire cables. What's the longest scsi cable I can use with a MEC, and where do you recommend I get 'em? Monoprice has 10', but that's the longest.

Thanks.
