Hi there, i'm new here, and new PARIS user

I recently bought some parts online to build a PARIS rig. A C16, a 442 interface, and an EDS500 card. Can i run version 2.2 or 3.0 on this system? It came with no software that's the reason i'm asking.

Do i need anything else to get this up and running?

I had a few more questions, but can't remember right now. I've had a long day today.

I'm pretty sure i'll remember them later on. Anyways

thanks,

jimmy
