Subject: Oy!!!...................... what a day

Spent the day loading and registering software. At one point, I was about
1/3 of the way through and somehow encountered a C37 error. You do not want
a C37 error. C37 error = suckage to the nth degree because, in my case, my
CDR drivers cold not be initialized by windows and this sorta put a dent in
the software loading routine. After warring with the C37 error for about 2
hours, I had to restore from a Ghost image and start over with the whole
enchilada.

All applications, drivers and VSTi's are working properly. I'm ghosting this
puppy before I go to bed tonight. Tomorrow we'll see if this ordeal has
solved the problem with crackling audio in SX when using 4 x UAD-1 cards.
I've reconfigured a lot of stuff and hopefully I've got my PCI bus overload
situation ussed...................hopefully.

Stay tuned for possible gnashing of teeth/rending of garments
tomorrow.........wait.....it's already today for some of you
guys..........so whatever.

;o)

Gota tell ya Deej I admire your persistance.

Very Impressive

Hey Deej,

Up here I'm "that" guy also...the one with comp troubles that no one's
even ever heard of. That's partly how I ended up with a comp sci guy as
my guru...lol ...finally someone who *understands* me....

I feel for ya, bro. Have you reached the 7th level of zen where you
have to install *everything* in the "correct order" also?...hey don't
laugh, it's odd that it makes a difference but it seems to...drivers
"eating" other drivers for lunch and that sorta stuff...hardware with
voltage that's not right, but will let a non-power user get away with
stuff...that sorta thing...

Keep at'r man! Our machines are more akin to "digital bulldozers" than
your average comp/kitchen device....lol

I have searched the net many times and, to my knowledge, I'm the only person
in the universe that is trying to use the particular hardware combination
I've got here. I could be wrong though.......I just haven't yet run across
anyone trying to use 3 RME PCI cards and 4 x UAD-1 cards. There are some
major *issues* with PCI overload and lots of configuration hoops to jump
through to get this to happen without crackling in the audio when UAD
resources exceed 40%..

I think my troubles have to do with using 3 x RME HDSP PCI cards instead of
using a MADI system and being hard headed enough to not want
to............MADI would not really give me the combination of I/O that I
want.

2 x HDSP 9652's and a Multiface is *exactly* the ticket to interface with my
Paris system, 6 MEC modules and all of the AES and SPDIF gear I have here.
There is a definite reason I'm putting myself through this grief, plus,
since it is sooo friggin tricky to get this particular situation to work, I
seem to get a perverse pleasure out of trying to bend it to my will.
;o)
