Nice. But, I have my thought on Steinberg these days..

Every since Nuendo's debut as the companies Flagship DAW(Music and Post).

But, it seems that Steinberg forgot about Cubase and it's user base. So, they reworked Nuendo and called it Cubase SX.

Problem: Cubase for all it's features is looked upon in the industry as a second-class DAW. Even , though it's really Nuendo minus a few post features.

My point: With this two product situation, Steinberg has diluted Nuendo's status as a Primeier DAW. How they can continue to charge new users List \$1700.00 dollars and Cubase list\$700.00 is absurd..

The Jokes on them (Steinberg). They are the only ones who are fooled in this "trying" to separate Nuendo & Cubase.

Even more, it's stupid to have 2 products with different names. Note: This applie to Maigix's Samplitude/Sequoia, as well as Microsoft's vista's Home, pro, advance...Stupid!

Like Apple's OSX, just one version. Multiple versions just confuses everyone and ultimatly dilutes the Flagship product.

If they need a lite version of Nuendo, then call it the lite version.

My Point #2: Although all of todays Daws can produce a world class recording, at a certain level in the recording game, "Hype" is king. The Hype name of a DAW. Like ProTools, Genelec, Apogee. etc.

If you are in the Business of making a living recording and mixing music, then you already know that "Hype" is king. Customers(Bands, Ad -houses) already know the buzz DAW terms. They could care less about how good brand X DAW compares to Brand Y's DAW.. They just know what's hot..

Steinberg's developement is very much hundered due to the fact that it has to code/cripple 2 products . The Nuendo base users who need features to compete

with Pro Tools, get's stifled with updates to Cubase.

And make no mistake(Steinberg) when you leave the word Pro out of your products name, it's deemed to not be a pro product.

Perception is a very powerful weapon. Even with N4's updates, to the public(not it's user base) it looks like "What new updates"..Looks the same to me..

I want Nuendo to succeed. It should be on top of the DAW pile, but it's not because of poor marketing and poor use of resources, and poor pricing..

Wow, I really need to start keeping up! haha.

I'm still at 4.03. :) Download time!

I'm DL'in it right now. 111MB...that's a whopper. Initial reports on the cubase.net forum are very positive.....one user reporting an 80% performance increase at low latencies using a quad core CPU. I suppose that means his performance previously totally sucked or there is some major multicore mojo happening in this release that could even benefit dual core setups.

I suppose we'll see.....the DL is extremely slow. Probably every Cubase user on earth pinging that server right about now.

;o)

It's rock solid so far....but then again, so was 4.0.3. I haven't gotten into the new features yet. I'm looking forward to exploring the routing options.

I've been getting some quirky, buggy crashes, but then I reopen the project and it seems to be "cured". It's almost as if the new patch sees something it doesn't like, goes to war with it, there is a sturggle with lots of angst and pain on both sides, the application freaks out and shuts down as the old and new patch fight it out and upon relaunch of Cubase, the new patch emerges victorious and the problem doesn't happen again.

The most recent freakout event was processing the tail of an audio event with time stretching.

Works fine now but for a minute there it was exciting.

DJ,

I had that happen a few times in 2.01 with TimeStretch recently.

Tom
