
Subject: OUTAGE - Sorry, it's AMAZINGLY windy here...

Posted by [Kim](#) on Tue, 31 Jul 2007 13:23:25 GMT

[View Forum Message](#) <> [Reply to Message](#)

We appear to be having some kind of wind strom which took out the power for a bit, and was a bit beyond the abilities of the UPS. Not sure how long we were out for...

....but we're back, and the UPS is charging again. :o)

Cheers,
Kim

Apparently the power was only out for 1 hr 20. The UPS should last that long
so I'm a little concerned...

Cheers,
Kim.

But it's only, err, well, a year or so old! Not even I don't think. Probably
about a year. Surely the battery can't have gone already...

And the weird thing was that the router DID keep going, only the server dropped
off and wouldn't start up again. Now I did test it just the other day but
only for a few minutes and it held up fine. It is likely of course that the
UPS only drains the battery slightly every now and again so perhaps the
battery has gotten a memory already, but why the router was running and the
server was not I'm not sure. Perhaps the server PSU is a little suspect,
though it never gives trouble when running on mains.

Kim,

Might want to check the settings for when the UPS kicks in. I've had a couple of time when the server PSU was less tolerant than fluctuations the UPS would let pass.

Maybe you should plug the beer fridge into it's OWN UPS...

David.

Jeff,

The power was 100% out, as nothing in the house had any power, however the router was still running. Now the router has a switch mode PSU that would likely tolerate nearly anything between about 20v and 280VAC so it wouldn't be much of a test, but the computer wouldn't power on.

I will do some further testing in the next couple of days. At least test that we have ten minutes backup time to cover glitches. Maybe the UPS battery could use a full cycle to get it back up to scratch.

Cheers,
Kim.

Hehe, I'm rather ashamed to say that the beer fridge is (outrageously) OFF at the moment. It's winter and I'm trying not to drink continually for a bit. Come summer it will be back...

....but it's not on the UPS in any case, as I'm sure you knew. ;o) Only the router and the server itself are on it. Not even the monitor for the server.

Cheers,
Kim.

Kim,
I would assume the UPS uses a Gel cel or car type battery, not a nicad, so
there would be no memory effect or the need to recycle.

Kim,

Gotcha, I didn't realize it had run for a period of time. I've had

servers that when the fail over happened, the voltage sagged enough on initial power loss that the server would just crash. Not typically an issue once the battery has taken over.

Jeff
