hi guys - great to find this forum !!! I am ex paris user/lover from long ago, who has long since gotten rid of his paris hardware. I'm looking for someone in the Los Angeles area that might be able to spend a couple (or a few?) hours exporting approximately 7 to 10 projects (and audio) to formats i can currently use. (or ... is there software that can read and convert ppj's and their audio without paris hardware?).

I'm perfectly willing to pay for the service.

thanks in advance.

-dan

If you don't find anyone I'll do it for \$25 hr CAD

Can FTP the files or send a DVD

Just a thought here but Reaper will read the PAF files and you could use it to convert them to wav files...unfortunately if your projects have a lot of edits, specific cross fades or time locations you might be SOL

Kerry would have a better idea as to the limitations.

AATranslator's the charm, it does a really nice job of this. Open the PPJ in PARIS, quick check for "illegal" channel/region names then "export as OMF". After that AAT will make it into whatever you want. Itd pay for itself in this first project too.

I'd have stuck my hand up to do this, but I didnt want to be a hoggy host , plus I'm swamped anyway.
