Hey guy's, typically I manually convert my PAF's to WAV's one by one via the PAF Converter. Tonight I decided to use Wavelab because of the batch processing capability. The files converted rather quickly, but when I imported them back into a Paris project, they were garbage. Is there something I missed using the batch processing in Wavelab?

Thanks!

yup. Do NOT optimize headers. Or conversely, you could use TJ Weber's program StripWav to remove extra header information of the WAV files that Paris can't read/doesn't know what to do with.

Hey Double AA, how goes it? Please educate a poor soul more on this topic and where to find "StripWave", or not "optomizing headers".

Thanks!

Ok, I found StripWave....looking for info on optimizing headers now.

In the preferences in Wavelab there is a check box that says "optimize
file headers"... UN-check it.

David.

Worked like a charm!

Thanks again!
