I'm going over to visit a friend today running Reaper on a dual core. I very interested to see what sort of track counts he's getting. He'll be running VSTi's as well. Synth dude. He's been having some trouble getting it going on win2003, so this may be moot until he gets his OS situation squared off, but once there, I'll try and post some info from the trenches.

I'm pretty happy with my current setup, but I've been thinking about where to go next -- when "next" comes. I'm no coder so I don't "know" sh*t, but, I get the impresson that Reaper is written from the ground up, rather than "new code on top of old code." When my buddy was running Reaper on his P4 he mentioned that it was VERY stable.

Happy Sunday morning to EST'ers, enjoy your coffee...

MR
